Map my walk app iphone

While your iPhone can't cure lepers or turn water into wine, it can help you do many other useful things like sharing high-resolution videos, diagnosing your own ailments, and even creating your own virtual life form! With the Apple iPhone App Store that will go live today, we decided to take a look at some of the most interesting third-party programs, apps and websites that have been developed to help make your iPhone an integral tool for work and fun. For IT departments that want more control over how iPhones interact with their networks, Azaleos has expanded its Remote Email Monitoring Services OneStop to the new iPhone 3G. Azaleos, a Seattle company that traditionally provides email management for BlackBerry and Windows Mobile devices, uses Microsoft ActiveSync technology to bring mobile devices under the control of its OneStop service, a subscription offering that provides 24-hour monitoring, and maintenance. The OneStop service is part of the Azaleos OneServer package that deploys a dedicated device within an IT network that provides an active/passive, fail-safe exchange platform, and clustered exchange for enterprise messaging. Open Source Wireless SyncFunambol from Funambol, an open source software development company specializing in mobile app servers, is now providing a free open source email synchronization app for the iPhone. Starting this week, iPhone users will be able to sync their Personal Information Management (PIM) data for free through the company's myFUNAMBOL website. The software for the application can be downloaded directly from the myFUNAMBOL website. For those who are tired of having their wallet or purse full of business cards, the paperless business cards of 211me may be just the ticket. 211me, which describes itself as a mobile mash-up company, allows users to manage their own cards, flyers and promotions designed specifically for mobile phones. Thus, companies can create digital business cards for their employees or they can design promotions that can be sent electronically to any mobile phone in the US. All brochures and business cards can also be shared on social networking sites such as Facebook and Friendster, the company says. Users can design their own content by uploading their photos to the 211me website, where they can choose from a wide variety of backgrounds and text styles. The concept behind RemindYou is remarkably simple - essentially, goal is to ensure that you never miss another appointment. And how does he do that, you ask? Well, synchronizing with iCal, Outlook or Entourage and then overlapping a graph of all your appointments on the initial iPhone image. So instead of seeing an image of Space Land as your default home screen every time you unlock your iPhone, you'll see a list of all your appointments. Remember You can be purchased from the iPhone 2.0 App Store for \$19.95 for a lifetime license. While the iPhone has revolutionized the way we browse the web on mobile devices, it can initially pose problems for new users who aren't used to typing in such a compact space. Nuance is now working on bringing its voice recognition technology to the iPhone to dramatically reduce the need for users to peck at qwerty keyboards. It works like this: you launch the app from the iPhone startup menu, you click a speak button once the app is launched, you verbally tell the program what you want to search for and then you click stop. Then the program will transcribe your words into text and perform an Internet search for you. You can watch demos of the software, which is still a prototype and will not be ready for release until the fall, on nuance's website. So far, everyone knows that iPhone 3G will support Microsoft Exchange ActiveSync and Cisco IPsec VPN to give enterprise customers at least some security guarantees for sending and receiving corporate emails. The hyperoffice people, however, want to give you more. When you sign in to your individual HyperOffice account through your iPhone's web browser, you'll have access to apps like document management with online storage and comments, discussion groups and shared documents, calendars, contacts, projects, and tasks. Because HyperOffice is a service, users do not need to download it from the AppStore and can access it exclusively through the company's website. Currently, the service costs \$7 per month per user, and can also work on all BlackBerry smartphones and devices. Is there anything more fun than developing your own strange creatures that evolve from single-celled organisms? Okay, so it may not sound like everyone's cup of tea, but that doesn't mean everyone can't enjoy Spore, electronic arts' strangely addictive strategy game that will be one of the flagship games to get to the iPhone platform. As demonstrated earlier this year, the iPhone version of Spore will give users touch-screen features in redesigning their own custom creatures, from their genesis as unique cells to their eventual evolution into intelligent and cooperative species. By using the standard mpeg-4 h.264 video codec and allowing users to upload videos of any length, mDialog is working to become a high-resolution version of YouTube. In addition to offering standard features such as being able to vote, rate, and comment on videos, mDialog also allows users to deliver fully customizable searches for and advice from your audiences in real time. Tailored specifically for Apple TV and iPhone, as well as the general Internet, mDialog offers users up to 1GB of free video storage, with monthly support plans of \$4.99, 4.99, 8GB of storage, \$9.99 for 20GB of storage and \$24.99 for 50GB of storage. MDialag can be accessed via the web and cannot be purchased through the App Store. Checking baseball scores on your iPhone is one thing; Check out the official highlights of the game is another. Jumping early on the iPhone 3G wave, Major League Baseball has developed an app called MLB At Bat that will offer fans the video highlights of the games on their iPhones literally moments after they occur. CURRENTLY, MLB plans to offer MLB At Bat for an annual fee of \$4.99. The app will be available when the iPhone App Store launches on July 11. Pentaho, an open source business intelligence application developer, has developed an iPhone web application that provides employees and management with mobile access to critical company data such as inventory reports, financial statements, income statements, and sales reports classified by customers, territories, and product lines. A demo of Pentaho's open source app for iPhone, which specializes in providing mining and business intelligence data analysis, can be viewed on pentaho's website. Over the past two years, Twitter has taken the online world as a happy medium between blogging and texting. By allowing users to post updates of up to 140 characters on their Twitter social networking pages, Twitter has emerged as a popular way for people to provide real-time updates about their work and life to their friends and colleagues. Twitter, an interface developed by software company Iconfactory, has been specifically designed to provide Twitter features to Mac users that have been available for broken iPhones since last year. It will officially come to the iPhone later this week. For fans of old-school eight-bit graphics games comes Bomberman Touch (see below) from legendary Japanese gaming company Hudson Soft. Bomberman tells the exciting story of a disgruntled robot trying to escape his factory job by blowing a lot of things. To win the game, you must guide Bomberman through various mazes while looking at fearsome enemies that look like scowling giant balloons. Like Pac-Man and Donkey Kong, Bomberman is a timeless classic that should make a successful transition to the world of the iPhone. Worried about the cough that apparently won't go away? Worried about the rash that's costing you to sleep at night? Don't be afraid, because information technology and health benefits company A.D.A.M. has developed a web application that allows users to combine their medical symptoms with potential assessments and treatments. In addition, the browser lets users know when they can help themselves through self-care or whether they should consult a medical professional. The company says your data and information are provided from its medically revised and URAC-accredited health encyclopedia. If 8GB of iPhone storage isn't enough for you, give Syncplicity's online storage service a chance. Syncplicity syncs up to 2GB of document, image, music and video files for free and let so instantly access it on your iPhone from within the cloud. All you need to do to access your stored data is enter the Syncplicity website and then browse through your stored documents. Syncplicity currently offers 40GB of storage for \$9.99 per month (\$99.99 per year), and the company will add 100Mb to your account for each referral you provide. A good tool for anyone who wants to get into a round of golf on vacation or on a business trip, GolfFlyover can provide iPhone users with three-dimensional maps of more than 10,000 golf courses throughout the United States. By the end of the year, the site predicts that it will have mapped all golf courses in the United States. All golf course information is provided free of charge, and no membership is required to view the maps. An oldie but goodie, AOL's Instant Messenger is one of the classic web apps for chatting and keeping in touch with your friends. Let's say you want to bid online for a 1955 Gibson Les Paul Junior electric guitar, but you don't have time to sit in front of a computer screen all day. Simple! Just charge your iPhone and use the native eBay app to get constant updates whenever that punk named Grifan62 has surpassed your offer. The eBay app is free and available on the App Store. Not wanting to fall behind in the world of online media, AP has created a Mobile News Network to provide readers with the latest headlines on politics, sports, business and entertainment. The iPhone AP app is free and is available in the App Store. Although it sounds like an app developed specifically for purists, Loopt's social network mapping tool is actually a location-based program designed to let you see where your friends are going out in your area. Essentially, whenever someone on your personalized friends list is connected to Loopt through your BlackBerry, iPhone, or other compatible wireless device, Loopt will track them for you on a custom map for wireless devices. If you don't want to be found at any given time, of course, you can exit Loopt or change your privacy settings. A quick reference to all your drug-related questions, the Epiocrates drug database provides information on drug use, recommended doses, pricing, interactions with other drugs, and potential adverse reactions. This is another app that is currently available in the App Store. This story, 20 Cool iPhone Apps was originally published by Network World. Note: When you buy something after clicking links in our articles, we can earn a small commission. Read our policy for more details. Details. Details.
